# Oil Spill! (Let's-Read-and-Find-Out Science)

## Synopsis

Did you know that an oil spill occurs somewhere in the world almost every day of the year? Oil spills can have many different causes, but the result is the same. Oil harms plants and wildlife that make the oceans and coastlines their home. Scientists are learning the best ways to combat oil spills.

Learn how you can help, too!

## Customer Reviews

I am a third grade teacher and the book "Oil Spill" was a fantastic addition to my Science hands on lesson on causes and effects of oil spills and on the environment and wildlife in America. I highly recommend it and the pictures and content are relevant for elementary age children.

Yes. this is a great book. Love it. This book is great for prepare children for what happens everywhere especially in our country. It answers the question How does and oil spill harm animals and the environment?

We just read this book as a read aloud for science in our homeschool. We learning alot about oil

spills and the damage they can cause. At the end of the book was the idea for kids to write to Senators about laws for oil tankers and such. My son and I plan to do this. This is a great lesson on how kids can be involved and can make a difference in the world today.

All of the books I've ordered have been "above expectations" for the price I paid. Thanks for making them available!

Had to do an 8th grade report on the spill. I liked this book. Told me things the Internet did not. Great price on

I loved it. Its well done and teaches children that they can take action to better the world.

This book is a perfect hook for the classic oil spill in a pie-pan simulation lab. Stop reading aloud before the clean-up methods and have students explore their own clean up theories. Then debrief the lab by reading the rest of the book aloud and discussing.

my classmates/students really enjoyed tying the book into the science lessons
