# About Time: A First Look At Time And Clocks

## Synopsis

an impressive history of timekeeping. "Horn Book Bruce Koscielniak, in this Common Core text exemplar, tells the intriguing story of the many years spent tinkering and inventing to perfect the art of telling time. When time itself was undefined, no one knew the difference between a minute, an hour, and a day. Then people started creating tools to measure time. First they used the sun, the moon, and the water, but soon after people began using their knowledge about the natural world to build clocks and to create calendars made up of months and years. Centuries later, we have clocks and calendars all around us! This title has been selected as a Common Core Text Exemplar (Grades 4-5, Informational Texts)

## Book Information

Age Range: 7 - 10 years

Grade Level: 2 - 5

## Customer Reviews

I had a project about time. I couldn't find in good books till I found this book. It explains all about clocks and time. I think the only con was how small the lettering was when I read it but still a awesome book!

My adult son is autistic and really plugged into time, clocks, weather, etc. I wanted to find something about time and clocks that was on his reading comprehension level -- yet not for "little kids." This was a hit when he opened it up Christmas morning. He picks it up all the time to read. The

illustrations are great also.

Bought this for my young son (reading level age 8-10). Terrific illustrations and very educational.

Bought this for my grandson for a homework assignment. Nearly fell asleep trying to read it. Has all the info you could want, but not presented in a way that would make you want to read it
