My 13 year old daughter wanted to learn programming, so I choose a coursera MOOC called "Programming for Everyone". The course is taught by Dr. Severance (Dr Chuck) and this is the book that is used. We are only one week and one chapter into the book, and I'm writing a review now because I just cannot believe how well he teaches by injecting humor into what would be considered dry concepts. For example, he teaches the concept of reserved words by explaining that a dog hears the word "walk" as a reserved word. In a sentence containing the word "walk", the dog hears everything else as blah blah blah... The dog only hears the word "walk". I'm taking the course

with her and am actually looking forward to doing so. I -- a middle aged Mom who has a messaging phone and still uses a paper planner! Update: My daughter did not last long in going through the coursera book, but she is 13 after all and on to a different project of building a dollhouse. I had to delay taking the course until I had more time, and I am finding it both challenging and helpful. There are worked exercises for each week that follow the chapters in the book. I am finding that it takes me multiple attempts to get the exercises correct, so the process reminds me of how I learned math as a child. Nothing is better at getting information solidly learned than to work problems over and over. I would highly recommend the coursera course. It can be taken at no cost, or you can pay to get a certificate. I paid to get a certificate so that I would stay on track in taking the course. I added a picture of the instructor as Snape. He succeeds in making this course fun! Update 10/21/15: I completed the first of five coursera courses based on the book.
